

In memory of

# **Sophie Jauffret-Osborne**

09.06.1971 - 28.10.2021

It is with great sadness that Novartis announces the loss of Sophie Jauffret-Osborne, our dear friend and colleague, who passed away after two years of a courageous battle against cancer.

During her 23 years of service, Sophie's engagement as a leader in our biostatistics teams, her commitment to a meaningful and high quality work, her sense of urgency, enabled her to support numerous new drug developments in the fields of metabolism and oncology. Her impact was outstanding in several innovative treatments to be found safe and effective by regulatory agencies, ultimately delivering new hopes for thousands of patients.

Sophie leaves a huge void behind. At the same time we are extremely grateful for who she was and all that she has given to us as a colleague, and for having shared with her those years of camaraderie and efforts to support patients in need.

Our deep thoughts go to her husband, her two children and her family in this time of grieving.
